SYED KUMAIL RIZVI

Software Engineering Intern - Summer 2027

Seattle, WA | kumailrizvi890@gmail.com | (425) 364-2649 | linkedin.com/in/syedkumailrizvi | github.com/kumailrizvi890 | portfolio-kumailr.vercel.app

SUMMARY

Computer Science student at the University of Washington, Bothell (B.S. Software Engineering, graduating December 2027) seeking a Summer 2027 software engineering internship. Builds full-stack products end to end in TypeScript/React, Python, and SQL/PostgreSQL - including a live portfolio platform whose demos run real Go, Python, and TypeScript backends, plus independent builds (barbershop booking, restaurant ordering) with auth, role-based access, and realtime data.

EDUCATION

B.S. Computer Science, Software Engineering - GPA 3.60 - University of Washington, Bothell Expected Dec 2027

Relevant coursework: Data Structures & Algorithms I/II, Algorithm Analysis & Design, Database Systems, Software Engineering, Computer Networks, Computer Programming I/II

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, Go, C++, HTML/CSS

Frameworks & Libraries: React, Next.js, Flask, Tailwind CSS, SQLAlchemy, Chart.js

Tools & Platforms: Git, PostgreSQL, Supabase (Auth, Storage, Realtime, RLS), Docker, Vercel, REST APIs, OAuth/SSO, Figma

PROJECTS

Live Portfolio Platform 2026

Next.js, React, TypeScript, Go, Python, Supabase (PostgreSQL), Vercel | portfolio-kumailr.vercel.app

- Built a portfolio where every project demo executes real backend code instead of showing screenshots: a Go service simulating fleet health and latency with an interactive load-spike trigger, Python services, and TypeScript serverless functions, deployed together on Vercel.
- Persisted live demo data in Supabase PostgreSQL using schema migrations and row-level security policies scoped per table, with no service-role key anywhere in the application.

Fade Kings Booking Platform (Independent Project) 2026

Next.js 14, TypeScript, Tailwind CSS, Supabase (PostgreSQL, Auth, Storage, Realtime)

- Built a complete barbershop booking system modeled on a real Lynnwood barbershop: guest checkout through anonymous Supabase sessions, a 3-step booking flow, customer rewards (points and redemption), and in-app notifications.
- Built the barber and owner sides: request approval/decline, weekly availability, services CRUD, photo/video uploads to Storage, and an owner dashboard with revenue and booking statistics plus a live bookings counter (Supabase Realtime), all in PostgreSQL behind row-level security.

Fast Bowls Ordering Site (Independent Project) 2026

JavaScript, HTML/CSS, Supabase

- Built a real-time build-your-bowl restaurant ordering site backed by a live Supabase project for menu pricing, orders, and an account/rewards module; the bowl assembles visually, layer by layer, as the customer orders.
- Built a Supabase Auth-gated staff admin dashboard for orders, menu, and staff accounts.

GameJet User & Revenue Analysis - Global Accelerator, Data Wrangling with SQL 2026

SQL

- Analyzed 22,576 game users in SQL to segment monetization behavior: 210 high-value users generated $40,255.35 in revenue vs. $7,334.20 from 701 low spenders, and median engagement was 8 sessions against a 32.1-session mean. Graded with no corrections needed.

Qmail - AI Scam-Detection Email Client - 5th Place, WSU Hackathon (Team Project) 2025

React, TypeScript, Tailwind CSS, OpenAI API, OAuth

- Co-built a responsive PWA email client with LLM-based scam classification using structured JSON responses and OAuth sign-in; led the branding and UX design.

WORK EXPERIENCE

Brand Ambassador - Instacart, Caper Carts Jul 2024 - Oct 2024

- Supported the launch of Instacart's AI-powered Caper smart carts, providing hands-on customer guidance across 500+ product implementations.

LEADERSHIP & AWARDS

Vice President - Pakistan Student Association and International Student Society, UW Bothell (2023-2026): organized and led 5+ events per academic year; founding member, Cricket Club. Dean's List, 5 terms (2024-25).
